SANITARY REPORT

OF THE

Borough of Royal Leamington Spa,

FOR THE YEAR 1894.

TOWN HALL, LEAMINGTON,

30th JANUARY, 1895.

TO THE CHAIRMAN AND MEMBERS OF THE
HEALTH COMMITTEE.

GENTLEMEN,

I have the honour to bring before you the Annual Report upon the Sanitary condition of the Borough of Leamington for the year 1894.

| | | | | | | | | | |
|--|-----|-----|---------------|-------------------|-----|--------------------|-----|-----|-----------|
| Acreage | ... | ... | ... | ... | ... | ... | ... | ... | 2,760 |
| Population in 1891 (Census) | .. | ... | ... | ... | ... | ... | ... | ... | 26,930 |
| „ estimated to middle of 1895 | ... | ... | ... | ... | ... | ... | ... | ... | 27,220 |
| „ per square mile | ... | ... | ... | ... | ... | ... | ... | ... | 6,280 |
| Water Supply | ... | ... | Artesian Well | (depth, 110 feet) | on | Campion Hill | | | |
| Town Sewage, pumped to Lord Warwick's farm at Heathcote. | | | | | | | | | |
| Town Refuse, disposed of to farmers. | | | | | | | | | |
| Height above Sea level | ... | ... | ... | ... | ... | ... | ... | ... | 195 feet. |
| Geological Formation | ... | ... | ... | ... | ... | New Red Sandstone. | | | |

BIRTHS.

546 births (272 males, 274 females) were registered, showing an annual birth rate of 20·05.

Tables I and II. give the births and birth rates by Quarters and Wards.

BIRTHS AND BIRTH RATES BY QUARTERS AND WARDS.

TABLE I.

| QUARTERS. | MALES. | FEMALES. | TOTALS. | BIRTH RATE. |
|-----------|--------|----------|---------|-------------|
| 1st | 84 | 64 | 148 | 21·7 |
| 2nd | 71 | 82 | 153 | 22·4 |
| 3rd | 54 | 58 | 112 | 16·4 |
| 4th | 63 | 70 | 133 | 19·5 |
| TOTALS | 272 | 274 | 546 | |

TABLE II.

| WARDS. | BIRTHS. | BIRTH RATE. | ESTIMATED POPULATION. |
|--------------------------|---------|-------------|-----------------------|
| North-East | 166 | 22·5 | 7354 |
| South-East | 210 | 24·5 | 8541 |
| West | 131 | 17·4 | 7515 |
| Milverton and Lillington | 39 | 10·2 | 3810 |

Mortality and Disease.

373 deaths took place ; lower by 86 than last year's figures ; and, showing an Annual death-rate of 13·7, more correctly shown as 13·6. On adding 21 deaths in Warwick Union Workhouse of persons belonging to Leamington, and deducting 22 deaths in our Public Hospitals, of persons not belonging to Leamington.

This is the lowest death-rate ever recorded in Leamington.

TABLE III.

MORTALITY FOR THE FOUR QUARTERS OF THE YEAR.

| QUARTERS. | TOTAL MORTALITY. | | | | | | | ZYMOTIC DEATHS. | | | DEATH RATE. |
|-----------|------------------|---------------------|-----------------------|------------------------|------------------------|-----------------------|---------|-----------------|----------------------|---------|-------------|
| | Under 1 year. | 1 year and under 5. | 5 years and under 15. | 15 years and under 25. | 25 years and under 65. | 65 years and upwards. | Totals. | Under 5 years. | 5 years and upwards. | Totals. | |
| 1st. | 23 | 9 | 1 | 2 | 32 | 39 | 106 | 4 | 2 | 6 | 15.5 |
| 2nd. | 21 | 7 | 3 | 5 | 31 | 40 | 107 | 2 | ... | 2 | 15.7 |
| 3rd. | 16 | 4 | 4 | 5 | 20 | 29 | 78 | 1 | ... | 1 | 11.4 |
| 4th. | 18 | 2 | 3 | 4 | 28 | 27 | 82 | 1 | ... | 1 | 12.0 |
| Totals | 78 | 22 | 11 | 16 | 111 | 135 | 373 | 8 | 2 | 10 | |

The mortality at all ages was below the corresponding figures of last year.

During January, and up to the third week in February, Influenza was prevalent; and caused the comparatively high rate of mortality in the first quarter.

Deaths under 1 year show a proportionate Infantile death-rate of 142.8 per 1,000 births; also lower than the rate of last year. 26 children, who died under 5 years, were insured.

CAUSES OF DEATHS UNDER 5 YEARS.

| | | | | | |
|-------------------------------------|-----|-----|-----|-----|----|
| Bronchitis and Pneumonia | ... | ... | ... | ... | 28 |
| Marasmus | ... | ... | ... | ... | 16 |
| Debility from birth | ... | ... | ... | ... | 10 |
| Tuberculosis | ... | ... | ... | ... | 5 |
| Imperfect development | ... | ... | ... | ... | 3 |
| Dentition | ... | ... | ... | ... | 8 |
| Convulsions | ... | ... | ... | ... | 8 |
| Premature births | ... | ... | ... | ... | 6 |
| Disease of Brain and Nervous System | ... | ... | ... | ... | 3 |
| „ „ Heart | ... | ... | ... | ... | 4 |
| Diphtheria | ... | ... | ... | ... | 3 |
| Diarrhoea | ... | ... | ... | ... | 2 |
| Whooping Cough | ... | ... | ... | ... | 3 |
| Burns | ... | ... | ... | ... | 1 |

The above mortality does not necessarily mean an Insanitary condition of dwellings; but, in my opinion, points to weakly parents; improper food; and want of due care regarding exposure.

I think that our Board Schools might, with great benefit to the community at large, teach the elements of Physiology and the Laws of Health; so that the generation growing up might, in due time, know how to properly feed and clothe infants, how to ventilate their dwellings, and keep the Sanitary apparatus of their dwellings cleanly.

ZYMOTIC DISEASES—

| | | | | | | | |
|----------------|-----|-----|-----|-----|-----|-----|----------|
| Diphtheria | ... | ... | ... | ... | ... | ... | 3 |
| Whooping Cough | ... | ... | ... | ... | ... | ... | 3 |
| Diarrhoea | ... | ... | ... | ... | ... | ... | 2 |
| Erysipelas | ... | ... | ... | ... | ... | ... | 2 |
| | | | | | | | <hr/> 10 |

The Zymotic death-rate was 0·3, exactly half of last year's figures.

It will be noticed that no death from Enteric Fever was reported.

Small Pox.

4 cases were reported, and were removed to Hospital. 1 case in July, 2 in October, and 1 in November. The latter was doubtful from the outset, and after isolation, proved to be chicken-pox.

The July case was introduced from London. The precautions taken to prevent the spread of the Disease were successful; and I have to thank Dr. Douglas, who was acting for me during my absence at the British Medical Association Meeting, at Bristol, for his great zeal and tact in following up this case, and tracing all possibly infected or exposed persons.

In October, Small Pox was again introduced to the Borough by a railway porter from Birmingham; and a sister, in spite of re-vaccination, caught the disease.

The remaining sister was again re-vaccinated, and strange to say, the operation was successful.

No death took place.

We owe our immunity from Small Pox in great measure to the fact that Vaccination is so thoroughly carried out in our Borough; and perhaps, in a minor degree, to the supervision exercised by our Police upon Lodging Houses, which really constitute the most prolific source whence this disease might spread.

I am glad to say that the general public in our midst do not appear to be afraid of Vaccination.

Diphtheria.

24 cases were reported; principally sporadic, occurring at long intervals, and in the majority of instances, impossible to trace to the source of infection. 5 were removed to Hospital.

In May, 8 cases were reported from the Warneford Hospital; the infection having been taken from a child admitted into the Children's Ward for treatment for some other complaint. One case was traced to the playing of the child over a Sewer Ventilator, and another was, no doubt, due to a filthy closet; while another case might have been, in my opinion, caused by the keeping of numerous pigs in the vicinity of the patient's house. I wish that our Byelaws would give me a little more power to act touching the keeping of pigs too near to dwellings.

Scarlet Fever (Scarlatina).

119 cases came to my notice. 112 were sent to Hospital, and *no Death* occurred. Scattered cases kept cropping up all through the year from every District. Schools, no doubt, spread much of the Disease; but, as the vast majority of cases were of so mild a type, I feel certain that some cases never came to my notice at all; for, parents will not summon Medical aid unless a patient is positively prostrate, and think that if a person can walk about and eat, nothing can be wrong; a mere "bit of a rash" or "Sore throat," is a trifle in the eyes of most working people. Again, amongst the poorer class, sick people are sure to have visitors, to gossip and exchange experiences.

At short intervals, I personally inspected the Board Schools in infected Districts, during a period of nearly three months; and I venture to think that my inspections were productive of good. In one School, I certainly detected in one morning, what afterwards proved to be Scarlatina in three instances, and Measles in a fourth. All children with suspicious throat symptoms, or showing congestion of the eyes, I directed to be sent home for observation, and Medical advice to be obtained.

I am glad to say that I saw no reason to recommend the closing of any School. However, I must repeat what I have said before in Annual Reports, I think that Medical Supervision of Board Schools—daily if need be—would certainly tend to prevent the spread of such Diseases as Scarlet Fever, Diphtheria, Whooping Cough, and Measles.

Whooping Cough

Was prevalent in February and up to the middle of March, when it died out; re-appeared at end of April, and finally left us in the middle of May.

3 deaths were reported.

Diarrhœa.

2 deaths took place in the 3rd quarter.

Enteric Fever (Typhoid).

6 cases were reported. 2 were sent to Hospital. No death took place

3 cases were introduced from a distance ; the others could not be traced.

Erysipelas.

18 cases came to my notice, including some which were reported more than once ; in fact, chronic cases ; and, as such, likely to appear again in my Returns.

It is a pity that the "Notification of Infectious Diseases Act" does include Erysipelas while Diseases of much more importance are excluded.

Improvements and General Sanitary Work.

So far as time permitted, I have carried out the instructions issued to Medical Officers of Health by the Local Government Board. 1894 has been the most arduous year through which I have passed since my appointment ; and your Sanitary Inspector has found his billet no sinecure since the month of May.

Taken from all points of view, I think the Borough may be congratulated on the general Sanitary condition during the past year. No epidemic, a low death-rate, a fair birth-rate, and, a Zymotic death-rate practically nil.

My Medical brethren have cordially helped me in many ways, especially in the working of the "Notification of Infectious Diseases Act" and pointing out nuisances. I offer them my best thanks, with the wish that we may continue to co-operate so happily. I invite the Medical profession generally to draw my attention to anything in the Borough affecting the Public Health.

It would save much time and labour if Medical men in reporting an Infectious case would kindly state the age of the patient ; and if the patient is willing and able to be removed to Hospital.

Some important improvements took place during the past year.

In Park Street 540 feet of new pipe sewer were laid ; and in Augusta Place 400 feet ; in both instances replacing a "Brick Culvert."

A storm overflow, 720 ft. in length, from Regent Grove, was a very important improvement. This now averts the flooding of cellars in the North-East part of the Borough ; and, excepting when the Leam and Avon are excessively high, will also act in the same way upon the Lower Parade. The higher

parts of Milverton and Lillington are now supplied with enlarged mains and a Pumping Engine ; this means a better water supply, and a region of safety in case of fire.

Enlarged mains have also been laid in Brunswick Street and Tachbrook Street.

The Turkish Baths are now heated by steam, by which the ventilation is greatly improved.

The Smoke nuisance, so often complained of at the Pump Rooms, has now been abated by the adoption of "Machine Stokers."

The water supply has continued good and of excellent quality. The average daily consumption per head was 19·7 gallons.

Table IX Shows the work of your Sanitary Inspector during the year.

It will be noticed that in 65 instances—"Bell" and "D" Traps were removed and 27 "Pan and Container" water closets were done away with. In 35 cases, water was ordered to be laid on to Closets, while 65 Pigs were removed as constituting nuisances. One Well was closed, the water having been condemned on analysis. Twelve years ago there were hundreds of private wells in the Town, these have been gradually condemned, as contamination was found to exist, and now there are about twenty only in use, and these, when examined and tested at intervals, bore analysis well.

Tables IV and VIII Show the Mortality at all ages by Wards and Public Institutions.

Meteorology.

The Meteorology Table (No. XII) which Mr. BARNITT has with so much care compiled for us, Shows the Records for the past year. It will be seen that the mean temperature was slightly above the average and that the month of April was 1°8 warmer than May.

The rainfall was about the normal average, no single month having been very high or low.

Humidity was a point higher than the average, and the number of rainy days was unusually large.

Mr. BARNITT deserves our warmest thanks for the trouble expended from year to year in furnishing us with these valuable Meteorological Observations.

Let me, in conclusion thank the Chairman and Members of the Health Committee, who have so generously helped me in the exercise of my duties during 1894.

I am, Gentlemen,

Your obedient Servant,

SAMUEL BROWNE, M.D, D.P.H.

Medical Officer of Health.

OF A CASE OF INFECTIOUS DISEASE.

PUBLIC HEALTH ACT, 1875.

Sec. 126 Any person who—

- (1) While suffering from any *dangerous* (a) infectious disorder wilfully exposes himself without proper precautions against spreading the said disorder in any street, public place (b) shop, *inn*, or public conveyance, or enters any public conveyance without previously notifying to the owner, conductor, or driver thereof that he is so suffering; or
- (2) Being in charge of *any person* (c) so suffering, so exposes such sufferer; or
- (3) Gives, lends, sells, transmits, or exposes, without previous disinfection, any bedding, clothing, rags, or other things which have been exposed to infection from any such disorder,

shall be liable to a PENALTY not exceeding FIVE POUNDS; and a person who, while suffering from any such disorder, enters any *public conveyance* without previously notifying to the owner or driver that he is so suffering, shall in addition be ordered by the Court to pay such owner and driver the amount of any loss and expense they may occur in carrying into effect the provisions of this Act with respect to disinfection of the conveyance.

(a) Dangerous infectious disorders include any of the following diseases :—Smallpox, Cholera, Diphtheria, Membranous Croup, Erysipelas, the disease known as Scarlatina, Scarlet Fever, and the Fevers known by any of the following names :—Typhus, Typhoid, Enteric, Relapsing, Continued, or Puerperal, and also any infectious disease to which the Act has been applied by the Local Authority in manner provided by the Act.

b) School, Church, &c.

(c) This person may be an adult as well as a child.
